

Wireless Network Booster High Gain Antenna

Strengthen & Extend Your Wireless Network*

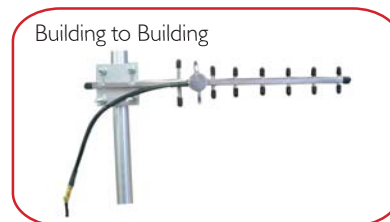

- Better range for your wireless network & wireless cameras
- Suitable for indoors and outdoors

WiFi Device

Increase your wireless network coverage, attach the Booster to your WiFi device.

Building to Building

Mount to your roof for even better reception.

IMPORTANT

Use of this antenna on a transmitter may contravene your country's radio frequency regulations. Please check with your government's regulatory body before fitting this antenna to transmitter

* Actual transmission range may vary according to location, interference & building construction

Wireless Network Booster High Gain Antenna

Strengthen & Extend Your Wireless Network*

Increase
your
connectivity

Push your Wireless Computer Network to the limit!

The Wireless Network Booster (or Yagi Antenna) can multiply the output power of your wireless unit, allowing it to transmit greater distances. It provides increased reception through walls, buildings etc.

The Wireless Network Booster is ideal for wireless computer networks that suffer from poor reception coverage, failing connections and poor signal strength. It is also suitable for expanding your wireless network to include additional computer workstations that are further away from the wireless access points, thus increasing the signal range of your wireless network.

Strengthen your wireless signal, transmit from building to building, in poor signal areas and more.

Technical Specifications

Freq Range (MHz):	2400-2483
Bandwidth (MHz):	83
Gain (dBi):	9
Connector:	N & SMA
